Assignment: Surprise Implementation

Team: Bug Butcher

- Blesson Tenson

- Ploynapas Pawachot

Feedback On Setup Instructions

The build and set-up instructions the user provides are clear and concise. They provide a step-by-step process that is easy to follow and understand. The mention of the required software and workload is helpful. We did have some issues with visual studio not being supported for mac anymore, so we had to use visual studio code instead. There also could have been more information on how to run the tests and what to expect after running them. Overall, the instructions help set up the project and get started.

Feedback On Test Cases

The test cases matched the description of the project very well and covered everything that was in the test case description. The test cases were very clear to implement. We did find them challenging because we were unfamiliar with C# and web development with Asp.net. The Not Implemented Exceptions did give us a clue on what to look for, so we did eventually figure it out via trial and error. The test suite did include positive and negative test cases, but it probably wouldn't have hurt to add more negative test cases. Some testcases also used "Verify" to check if a specific string of code was run. This was useful to help us figure out what to write and get started but for some testcases like in the Transactions Controller it did cause us to include useless code.
